Use Bluetooth to connect certain devices to your phone without using a cable. After pairing the Bluetooth device first, the device can pair automatically. If your phone is connected to something via Bluetooth, you'll see the Bluetooth icon at the top of the screen. IMPORTANT: Turn Bluetooth on or off with your finger pointing down at the top of the screen. Tap Bluetooth. Tip: To save battery power, turn off Bluetooth when not in use. Bluetooth is disabled in Plan mode. Step 1: Bluetooth accessories Important: Your device will stay paired until you pick it up. Option 1: Use the Settings app (all Bluetooth accessories) using your finger at the top of the screen. Press and hold Bluetooth. Click to pair new devices. If you don't see any new devices, check the "Available devices" section or click more to reset. Click the name of the Bluetooth device you want to pair with your device. Follow the instructions on the screen. Tip: If you need a passcode and don't have one, try 0000 or 1234 (the most common passcodes). Option 2: Use notifications (quick pairing accessories only) Make sure your Bluetooth accessory works with quick pairing. Accessories that work with quick torque have this information on the packaging. Many people also say "made by Google" or "Made for Google". Find accessories in the Google Store. Your phone uses Android 6.0 or later. Your phone has Bluetooth and location. Activate quick pair accessories and switch to pairing mode. Make sure your accessories are close to your phone or tablet. When you get a notification, click on the pair. You will get "Device Connected" or "Pairing Complete" notifications. If you need to set up accessories, click Set Up Now. Tip: If you don't get a notification, open the Settings app on your phone and click Connected devices. In the area box, select the device you want to pair. Find out more about Quick Coupling Accessories. Step 2: Song with your finger at the top of the screen. Make sure Bluetooth is turned on. Press and hold Bluetooth. In the list of paired devices, click the device that is paired but not connected. When the Bluetooth phone and the device are connected, the device will show as "connected". Set up, unpair or search for Bluetooth accessories Pair, rename or select Bluetooth accessories, swipe to the top of the screen. Press and hold Bluetooth. If your accessories are listed under "Available media device," click Settings next to your device name. If there are no accessories under "Previously connected devices", click Show all. TOAppendix, press settings. Make changes. To rename the attachment, click Modify at the top. To disconnect, click Disconnect. To completely delete the device from your phone, click Forget. You can activate or deactivate other settings on some devices. Advice. Anyone can change the general Bluetooth settings on a tablet that people use. Modify the Bluetooth name of your phone or tablet. Display screen from top to bottom. Make sure Bluetooth is activated. Long press Bluetooth. Click the device name. If you don't see the device name, click Plus. Rename this device. Enter a new name. Click rename. Find important accessories for quick couples! After connecting to Fast Peer, the Bluetooth accessory will be connected to your Google account. Other connected devices can recognize recently added accessories and automatically prompt you to connect them. Open the Settings app on your phone. Click on saved Google devices and sharing devices. Advice. To automatically save devices, activate automatic devices. Google collects certain information to quickly pair your Bluetooth devices with devices that use your Google Account. Some of these features use Google Play Services. For example, Fast Pair collects: Personal data for functional purposes, such as the name you give your Bluetooth device during configuration. Performance data and use the information for analysis. Disabling Fast Pair Data collected by Fast Pair is encrypted during transmission. You can delete data collected by opting out of the Fast Pair service. Open the Settings app on your phone. Click on saved Google devices and sharing devices. Related Resources Bluetooth Troubleshooting. Mobile sharing via Bluetooth. Ask the community for help. Get answers from community experts. With Bluetooth PC Dialer, a phone call can always be found with one click, no matter where the number is on your computer. Bluetooth PC Dialer is both a standalone application and an Outlook add-in. This means you can call any of your contacts by clicking the Call button in Outlook or email. The sender of the mail, highlighting this e-mail. Postal address. Or by copying the number in the clipboard and pressing the Ctrl-Shift-D keyboard shortcut. When connected to the Bluetooth car radio, the sound of the phone is transmitted without problems. Transparent, without cuts, good quality. My problem is that calls do not connect via bluetooth. Unable to loginThis only happens with my OnePlus 3T. Music streaming music and other phones about playing music and making the right searches. Is there any solution? It would be very grateful. I'm not sure it was the same problem, but I returned to Bluetooth 3.5.4. Problems. The title Bose Bluetooth is connected, connected and well played. But after the headphones leave an inactive sound. When the Bluetooth head block is connected, the sound flow on the phone is without any problems. Net, no pin, quality. My problem is that the calls will not be connected through Bluetooth. There is no way to connect phone calls using the applicant application using Bluetooth using Bluetooth, and when you turn on the Bluetooth settings, "Bluetooth is connected (no phone)". This only happens with my OnePlus 3T. Makes other phones and appropriate calls associated with the music flows of the main blocks. Is there any solution? Bbero G is rarely evaluated. Select the phone confirmation box by opening the Bluetooth-> Double Devices and clicking the Settings icon and Bluetooth. If it doesn't work, try charging your phone in your car. The phone sound button is already marked by default. So it wasn't a problem. I also tried to cut and re-connect the same problem. The man after the fresh Nougat update is not marked by default. The phone sound button is already marked by default. So it wasn't a problem. I also tried to cut and re-connect the same problem. I don't give up again. I wanted to forget a few connected devices (remove the name of the device from the double list). YES. The factory reset and updated the product software of the automobile head. He also removed the Bluetooth connection from the phone settings. A few of them had the same problem after the connection. I'm in the dark. The box is written "without a phone", but it is clearly marked as "phone sound". Forget Bluetooth from Android. Turn off the device. Then restart the phone and connect. This process works as a solid reset of the connection and should be able to solve the problem. Source: Experience, best teacher. Forget Bluetooth from Android. Turn off the device. Then restart the phone and connect. This process works as a solid reset of the connection and should be able to solve the problem. Source: Experience, best teacher. I have the same problems with OP and I tried your offer but stillWork. He can listen to sound through Bluetooth without any problems, just can't use the phone's audio call. Hi, I have the same problem. I have no solution. I tried the solutions in the forum, but nothing helped. But it happens to the resurrection Rom Rom Remix. The oxygen connector works well. You have a problem? Try Settings-> Location-> Tree Points at the top-> Scan-> Turn off Bluetooth scan (still BS). It solved my 2016. Ford's car problems, maybe it will solve you. Posted by my OnePlus A3003 when Tapataalka, thanks, but sorry, the old man doesn't work. I have this problem with the ROM recovery. In the case of music, all is well, but in the case of connections, I have a message to the Bluetooth menu "No Calls". I don't have this problem with oxygen. I also have this problem except that it is HTC 10. It must be part of ROM because I also use Resurrection Remix. I have a Pioneer CD player (model deh-xsomething). This is a common problem in the BT tray in the derivative OS. They have to fix something to work with our devices. Since most Rom is based on DOOM, it means that others, such as Resurrection remix, also have this problem. AOSP, OOS and Carbonrom do not have this problem. I corrected the problem of remix of the resurrection using the BT AOSP amendment. Here is a reference to my topic. Please let you know if this is right for you. Try Settings-> Location-> Tree Points at the top-> Scan-> Disable Bluetooth Scan (and this is BS). It solved my 2016. Ford's car problems, maybe it will solve you. Posted by my OnePlus A3003 using Tapataalka Brilliant. Thank you. It worked for my Renault Megane. but only with Xenon HD. Thank you but sorry, it doesn't work. I have this problem with the ROM recovery. In the case of music, all is well, but in the case of connections, I have a message to the Bluetooth menu "No Calls". I don't have this problem with oxygen. My do the same, Nexus 5 with Xenonhd. Can connect, the sound of the phone is controlled, but Bluetooth settings "connect without a phone". And I can't call or accept Bluetooth calls. ----- The entry has been added 23:48 ----- The previous entry was 23:46 ----- You but sorry , old works. I have this problem with the ROM recovery. For musicThis is normal, but if there are calls about the lack of calls next to the Blutz menu. I don't have this problem with Oxygena. Do the same, Nexus 5 with XenonHD. You can connect, the sound of the phone is marked, but the Bluetooth settings are written "The phone is not connected". And I can't make or accept calls over the Bluetooth. Other ROMs (AOSP and Two) work normally over Bluetooth. Do the same, Nexus 5 with XenonHD. You can connect, the sound of the phone is marked, but the Bluetooth settings are written "The phone is not connected". And I can't make or accept calls over the Bluetooth. ----- The record was added at 23:48 ----- - Nexus 5 with Xenonhd. You can connect, the sound of the phone is marked, but the Bluetooth settings are written "The phone is not connected". And I can't make or accept calls over the Bluetooth. Other ROMs (AOSP and Two) work normally over Bluetooth. This is corrected using a hinge for OnePlus 3/3T owners. If you are interested, I have provided instructions on how to create such a device for your device. Page 2 We would like to report that the addition of OnePlus 3/3T Bluetooth also works on OnePlus 2. I use line 7.1.2. Thanks. Last Edit: Mar 16, 2018 Try Settings > Localization > During Tree Up > Scanning > Disable Bluetooth Scanning (still BS). This corrected my 2016 problems. Ford in cars may be your problems solve Wysane Z Mojego OnePlus A3003 Prea Uoheciu Tapataalka The same problem with Oukitel K6 that appeared recently after the last software update I decided it gone.
