Magisto is a video editing application with a presentation function directly on the mobile phone. It is full of features that will make you feel like a pro.Magisto is a video editing tool for Android where you can create amazing movies or presentations with ease. Editing video files on your mobile phone is a faster choice than using your computer. Unless you are working on a professional and detailed project, your phone is just as powerful. This convenience plays Magisto's strengths. The application makes it easy to create videos or presentations with music in the background. The editor uses AI and makes the process semiautomatic. Artificial intelligence can also learn what you use for videos and adapt. While you make a video editing or presentation, you can add some effects to improve it or apply a filter that can completely change the video. You can make a wide range of modifications, although this is limited unless you purchase the professional upgrade. For your music slideshows, you can add authorized tracks and publish results without fear of a copyright strike on YouTube or shame on social media. Thanks to this, your videos and projects have a more professional feeling for them, unlike the royalty-free alternative. The drawback to Magisto is small. However, it is a problem present both in the free and professional versions of the app. When you try to save a video, you will probably encounter a processing error. This forces you to start changing from scratch.Can you run this program? Magisto is available for Android 5.0 or on and on many browsers. Is there a better alternative? Yeah.
