There are many stories about how people find out that their partner is cheating on them through random people on social media. Moreover, with all the latest news, it is difficult for parents to trust their child with a phone. After all, who doesn't know the blue whale challenge and other similar things for kids. However, preventing your partner or child from using your phone is not a good idea. This can do more harm than good. Instead, you can track their phone with a spy app. So this guide to the top 10 hidden spy apps for Android will be exactly what you need. Here you will find stealthy android spy services that can get the data of any android device in minutes. Without further ado, dive into the list and find out about all these great apps that are waiting for you: Top 10 Undetectable Hidden Spy Apps for Android Learning how to work with hidden spy apps was not easy. I had to go through many of them to get to know each one better. However, I was willing to do so to make sure you weren't wasting your time. Part 1: Spycy Spycy is my favorite app on the list and no other app can compete with it. First, Spycy is a web-based phone monitoring service that can track ANY device, be it iOS or Android. Spycy for Android has many features that you will never get tired of. The golden part is that you are NOT required to root the target Android device (or devices). Its premium features can spy on any phone better than any person. I know you think I'm exaggerating. But check out its specs for yourself: check out the live demo. Try Spycy Stealth Mode When you use Spycy's hidden spying solution for Android, the target user will never know that you are watching them. This is because Spycy always works in stealth mode. You need one-time access to install the Spycy app on the target phone. However, the userThere are many stories of people finding out that their partner is cheating on them through random people on social media. In addition, with the latest news, parents find it difficult to trust their child with the phone. Because who doesn't know them, the blue whale challenge and other child-friendly things. However, do not prevent your partner or child from using the phone. That can do more harm than good. Instead, you can spy on their phone with a spy app. Therefore, this guide to the 10 best hidden spy apps for Android is what you need. You can find stealth Android spy services that can get data from any Android device within minutes. Without waiting any longer, let's go down the list and find out all these cool apps waiting for you to try them out: Top 10 Hidden Android Spy Apps That Can't Be Detected It wasn't easy finding working hidden ones Find spy apps. I had to test many of them to get to know them better. However, I was willing to do that to make sure you weren't wasting your time. Part 1: Spycy Spycy is my favorite app on the list and no other app can compete with it. For starters, Spycy is an online phone monitoring service that can track ANY device, be it iOS or Android. For Android, Spycy has many features that you will never get bored with. The golden part is that you do NOT need to root the target Android device (or your device). Its top-notch features can spy on any phone better than any person. I know you may think I'm exaggerating. However, see the specs for yourself: check out the live demo. Try Spycy Stealth Mode Now Using Spycy Stealth Android spy solution, the target user will never know that you are spying on them. This is because Spycy always runs in stealth mode. Requires one-time access to the target phone to install the Spycy app on it. However userhe will know that you have such an application installed on his phone. This is because after installing the app, the app icon disappears. Only you can run it with the secret code. The app runs silently in the background. Unless you tell the user yourself, they have no idea something like this is running on their system. It's a truly covert and undetectable design focused on stealth. As for the installation, the size of the application is less than 2MB and it installs in a few seconds. Since it doesn't take up any storage space, you don't have to worry. In addition, the application does not drain the battery at all. Hence, the targeted user never suspects that anything suspicious is going on. Your phones will behave completely normally. Finally, if you want to uninstall the app, you can do it with one click from the Spycy control panel. This dashboard opens in any web browser. Hence, you never have to access the target Android device ever again. Why Spycy is the king of hidden phone spy apps Spycy is hands down the best hidden phone monitoring solution I've found on the internet. And I'm not alone in this opinion. Spycy is already used by millions of users worldwide. So it must be something special. Well actually there are many strange things about Spycy. 1. No Root: Spycy does not require the target Android device to be rooted. This is the golden edge I found for Spycy. Rooting your phone compromises the security of your device. So I like that Spycy can work without being rooted. 2. Web Interface: Spycy can be used from any web browser. All you need is an internet connection. Therefore, there is no need to install any applications on the systems just to see the results. 3. Simple Interface: Spycy works through Spycy control panel which is very easy to use. All functions are located on the left side of the dashboard. Each function is assigned its own register. You no longer have to spend hours trying to figure out how to do it. Works in seconds. 4. Easy Installation: The installation process takes about five minutes. And once the installation is complete, Spycy will immediately go into stealth mode to keep the user unaware. how good is it 5. Brand equity: Spycy is the largest spy phone brand on the internet. Its huge user base and reputation in the market make me trust it with my personal information. Also, I've read about countless big names in the market who have spoken well about Spycy. This removes all doubts from users. 6. Customer Support: Spycy offers 24/7 customer support. You can call them at midnight and they will solve your problem in minutes. That's probably why no user gives up on it after the first use. Most Spycy users still order it. This is only part of it. You can experience all the benefits of using Spycy for yourself. Here's a free Spycy demo for you to try. What can Spycy Spy On Spycy has so many features to spy on many things on the target phone. These include: Call Spying: Spycy can provide you with a report of all incoming and outgoing calls made from your device. Furthermore, these logs are also accompanied by details like call duration, caller identity, etc. Plus, you even have a call recording feature if you need it. Social Media Spying: Spycy has specific modules for each social media app. You can follow someone on Facebook, Snapchat, Instagram or any other social network. This way you can check all the user's chats and even the people they are chatting with. Keylogger: Keylogger is my favorite Android feature in Spycy. It monitors all keystrokes on the target phone. This includes their usernames, passwords, search queries, and the messages they type. Location Tracking: Location Spy shows the current location of the user. It even shows their recent locations, with timestamps. Additionally, you can even set location boundaries on the map (known as Geo Fence). You will be notified when a user exceeds these limits. There are several other features. However, it would be impractical for me to list them all here. Why not check them out with Spycy's free live demo? (no application installation required). Part 2: Cocospy Cocospy is another phone monitoring app that is Spycy's closest competitor. There is probably no one who would not love Spycy at first sight. However, if you do, Cocospy will definitely close the deal for you. Cocospy is a very popular phone spying tool, created by some of the world's greatest IT minds and used by millions of users in over 190 countries. It is so popular and amazing that many apps have even tried to copy its interface but failed. And honestly, I don't judge them. Cocospy's interface is so inspiring that what it can do often surprises me. Like Spycy, this app also works in stealth mode. If you use Cocospy, the user will never know that you are following him. The best part is that it can achieve extensive snooping without rooting the target device. That's what I call perfection. If you think you'd like to see it for yourself, you can watch a live demo of Cocospy here. For the rest of you who have already made up your mind, you can check out this Cocospy review. Part 3: Spycy Spycy is a spy app used to monitor someone's text messages (SMS). Texting can often provide important information about a person. They can also be useful for obtaining a one-time password that can be used to log into social media accounts. However, most people now use social media and instant messengers like WhatsApp to chat with anyone. The tradition of texting is outdated. Therefore, I personally would not buy a dedicated application solely for this purpose. Especially if I can get my hands on Spycy (which, by the way, also has a messagewith many additional functions. Even if they offer a genuine phone spy service, they should at least put more effort into their website. At first glance it looks very suspicious and even prompts me to download some software without warning (don't know why). Overall a decent (but not very good) app. Also Read: How to Spy on Cell Phone without Installing Software on Target Phone Part 4: Minspy Minspy is an undetectable Android spy app that aims to provide a phone monitoring solution for your kids or employees. While I wouldn't say it's feature-packed, it can get the job done if you don't need too much. It has call log, WhatsApp spying, location monitoring and some other useful features. You also need to install their app on the target phone. Although the app doesn't work as stealthily as Spycy. While they don't offer anything fancy or extras, their pricing plans are extravagant. You have to pay that much if you want to use their app even once. And for the price, if you thought you were getting the best of everything, you are wrong. This app requires the target phone to be rooted for some of its features to work. Definitely a breakthrough for me. Part 5: Spycy Spycy is one of the best phone spy apps specially designed for people who doubt their spouse is cheating. While they're fairly focused on their audience, they don't offer any new or specialized features. It has a web interface. You can use Spycy regardless of the target device type (iOS or Android). It can help with WhatsApp monitoring, call monitoring and some other functions. Installation isn't that easy, but they offer free online help during the installation. However, I would prefer a simpler configuration. In this post, you will learn how to read someone's WhatsApp messages using Spycy. While I can compromise on most other cons, the main issue for me is that you need to rootAndroid phone if you want Spycy to work. Sigh. With so many apps offering premium features without root, how far does this app fall behind. Part 6: Spycy Spycy can be used to monitor text messages, calls and social media chats of all users. It can work on both Android and iOS. It works similarly to most Android trackers. Install the app on the target Android phone and you can spy on it. The main advantage of this tool is its interface. I found it very interesting and useful, and once I started using this software, I couldn't stop using it. Spycy can monitor a user's calls, messages, and location. It is compatible with Android and iOS. Auto Forward is a good WhatsApp spy software for iPhone. Part 7: Stealth Genius Stealth Genius is an undetectable spy app for Android and iPhone. It can be used to monitor your child or spouse if they are cheating. It steals data from the target's phone and uploads it to Stealthgenie's servers. You can track all phone activity from the Stealthgenie dashboard. However, you need to install the Stealthgenie app on your phone or computer to monitor the results. Not only that, but the installation process is not as easy as you would like. And while it knows it's not the most popular app, the prices don't reflect that. The fee is high and must be purchased for at least a whole year. Don't Miss: How To Spy On Someone's Phone Without Knowing Part 8: Guestpy Guestpy is a hidden phone spy app that can be used to monitor any user's SMS or internet activities. It is available for both Android and iPhone. It can capture instant messages, call logs and social media messages from any user. It also has an Ambient Listening feature that can hear the surroundings of the device. There are some other features as well. That's not bad considering the features and design. However, the price plans are not realisticfor every budget. Although the plans are broken into three parts, the two inexpensive basic plans lack most of the features. So if you want to take full advantage of it, you would have to spend a lot on the most expensive plan. Nice marketing ploy I would say. Don't Miss: Top 10 Best Text Message Spy Apps Part 9: Spycyhuman Spycyhuman is all about monitoring your underage child's phone activities. Therefore, all of its features focus on this aspect. It is more of a restrictive app than a spy app. You can use it to restrict your child's access to certain websites and apps (which Spycy and Cocospy can do, too, while providing additional features). The good thing is that no root is required. The not so good thing is that there aren't even enough features that it doesn't matter. The price is cheap and affordable for you. However, you can buy Spycy with many other features for the same price. Part 10: Spycy Spycy is a self-proclaimed phone data aggregator. Used to collect target device data. Well, that's just a fancy way of saying phone spying. It has a web interface that works the same as the other items in the list. However, the site is very lacking in aesthetics and design. Since the app offers its services through its website, I think it should invest more time and capital to improve in this area. Other than that, the features aren't that bad (or so it seems). The site doesn't have many tutorials to refer to. So when you're stuck alone, you're stuck alone. And while it may have worked in their favor, they've written a few reviews about their app themselves. That's a bit of a surprise to me. In addition, the price per day is calculated. While this might seem like a good thing, the daily fee turns out to be a very expensive monthly investment. Now that you know about itBest Cell Phone Tracking Apps for Android. Why not take some time and pick your favorite? Think carefully and consider all the important factors to make a decision. Let's see if your answer matches mine. Part 11. Frequently Asked Questions If you

are thinking about using a hidden spy app for Android, you have many options and also many doubts. So now I will try to answer some of these doubts: Do I need to install a spy program on the phone I want to spy on? With Android phones, it is mandatory to install a spy app on the target phone. This is true regardless of the spyware or method you choose. Can I spy on an Android phone while it's really hidden? If you use the apps at the top of this list, spying on Android phones is possible, even though they are actually hidden. The better app you choose, the more privacy it offers. Do I have to pay to use an Android spy app? All Android apps have a price. However, with an app like Spycic, you can spy on your Android phone for just a few dollars. Do I need multiple apps to spy on my Android phone? Not if you use a good Android spying solution. The best Android spy apps in this list can offer all the features of Android spy. How long does it take to spy on an Android phone? If you do everything right and choose a good Android spy app, spying on your Android phone will take no more than five minutes. Sometimes it may take longer if you have slow internet. Final Verdict: My Pick To be honest, the competition for the best phone tracking app isn't that great. All of the apps listed in #3-10 are so far behind it's almost embarrassing. The name must be decided between Spycic and Cocospy. These two apps offer the most features on the market at the lowest prices. I have a hard time deciding between them. However, since I like the user interface andfrom Spycic more, my heart goes to Spycic. I've been using it for a long time and haven't found anything better yet. If you are looking for free hidden spy apps for Android, I don't think you will find anything better than Spycic. If you want to get Spycic now, you can follow this link. Last I heard they offer a huge discount. This post is also available in: [Portugués \(Brazilian Portuguese\)](#) [Español \(Spanish\)](#) [Deutsch \(German\)](#) [\(German\)](#)
