Continuously continually difference

I remember reading that there is a difference of meaning in these words, one I have never understood enough in this sense: 1) "I am constantly learning new things." 2) "I am constantly learning new things." I think the first is more correct, but I am not sure. I'm about to try to do some research. I think both are used informally. all opinions? and anyone can find all information about the oo? gaer hi gaer; I see no difference between the two. I probably don't hate. 2 in a conversation because it sounds less formal continuously. can be personal preference, though. both have the definition of "without interruption" in my dictionary. the denotation of words are equal in this context. select your word for connotation; continuously, which means regularly, constantly for annoying, endless cycles. I agree with lying on the oo, even if I make it see a difference continuously (or continuous) means that you are learning all the time - you do nothing else. means that you are constantly very aware that you do not know everything and very often find yourself learning something new. In fact, I discovered a very long article that illustrates the theoretical differences between continuous and continuous. a similar discussion is over the adverbial forms, continuously and continuously. Meanwhile, I couldn't find anything constantly. I should have checked more before asking the question, and I would like to be able to change the thread: // constant continuous and now I am really confused. gaer hi gaer, you know about the british national corpus (bnc?) if you have some free time you can enjoy the check it out. for quick instructions on how to use this portal, scroll down until you see this on the page; Finally, you can easily compare between words and other semantically related words. a simple search, for example, compares most of the names that appear frequent with pure, complete or total (unless absurdity, complete account, total imbalance is also possible to compare different registers, the oo and placements ... http: // view. ... byu.edu/ this is only a portal the current bnc could have some interesting information too continuously adv does it again and again (starting a | á fine | start a | end á | and so on) continuous adj starts and never ends (starting a | á | á | fine) constantly adv without interruption;. It would be a completely satisfactory conclusion to many discussions on this totally fascinating forum. Thank you, I often get here, as you suggest. I didn't have a problem with either of you until you made me think about the two words next to you! Before reading the posts I thought about how to flow - like water. I'm assuming it's because most of the physical problems I've encountered with water use the word continues (when it comes to water). Suppose a 55-gallon liquid jar the specific gravity of tap water was leaving a 1 1/2-inch tube at the bottom of the vat at the continuous rate of 2L/s while at the same time the water was entering the top of the vat at the continuous rate of 454mL/2s.... Interesting, things like electricity, are usually measured using constant - that makes me wonder if it is cyclical (like a headache constantly pounding, or electricity), that you use constant, while if it is flowing, you would use continuous.... However, saying or and swapping words does not lose physical problems one of their pizzas... - and if I had studied physics under a different author, I could use opposite words for the continuous flow of water and the constant flow of electricity. You can use constant, continuous and continuous to describe the things that happen or exist without stopping.1 "constant" Describe something as constant when it always happens or never goes away. He was in constant pain. I'm getting tired of Eva's constant criticism. 2 "Continuous/Continuous/Continuous/Continuous/Continuous/Continuous is usually used to describe something that often happens during a period of time. If something is continuous, it happens all the time without stopping, or it seems to do so. For example, if you say, "There was a rain going on," you mean it rained a lot. If you say, "There was rain," you mean it didn't stop raining. Continual can only be used in front of a noun. Don't use it after a verb. The continuous can be used both in front of a noun or after a connecting verb. There have been continuous demands to reduce costs. He was still smoking despite the constant warnings of his nurse. There was a continuous background noise. The breath should be slow and continuous. If you are describing something undesirable that continues to happen or exist without stopping, it is better to use continuous rather than continuous. Life is a continuous struggle. He was always in pain. 3 'continuous' or 'continuous' If you are describing something undesirable that continues to happen or exist without stopping, it is better to use continuous rather than continuous. Life is a continuous struggle. It was sad to see the victim of continuous pain. Copyright © by HarperCollins Publishers. All rights reserved.
