

I'm not a bot

Hi all, I am looking for the spanish equivalent for BoP. Any suggestion? Thanks!

This afternoon I have been reading some documents related to renewable energies, specifically wind energy. I have found this concept a lot of times. The best description for "Balance of Plant" I have found is this: "The BoP works cover all the civil and electrical works required for the project that are not included in the turbine supply contract. The works generally covered under a BoP contract include: access roads, crane pads and laydown areas, turbine foundations, turbine transformers (although these are sometimes included in the turbine supply contract), power collection network, substation and meteorological mast." Isn't it Balance of Payment Nope, for sure not. But thanks! Ok, como soy español, lo explico en castellano. En energía eólica es habitual que el fabricante de los aerogeneradores sea también el que se encargue de la preparación, montaje y puesta en marcha de los mismos. La preparación incluye transportar los aerogeneradores desde la fábrica hasta el parque eólico, hacer las cimentaciones y las plataformas; el montaje se refiere tanto al mecánico como al eléctrico; la puesta en marcha es exactamente eso: puesta en marcha. Es evidente que para transportar hacen falta camiones (una empresa de transportes). Para el montaje, una empresa que haga cimentaciones (obra civil) y otra que ponga las grúas. Y así, todo. Hoy en día, sin embargo, pasa en muchas ocasiones que se contratan solamente los aerogeneradores y el comprador se hace cargo de todo desde ahí: transporte, cimentaciones... etc. En inglés, todo trabajo que no esté incluido en ese contrato con el fabricante de las máquinas y que sea necesario para poner el parque en marcha recibe ese nombre de "Balance of Plant" o BoP. ¿Más sugerencias? Vi que estás en España y como en todos lados las cosas son distintas conseguí esta nota de tu país que traduce BoP como Balance de Planta Calvert Cliffs, situada en EE.UU. y operada por Constellation Energy Nuclear Group (CENG), actualizará los modelos de la totalidad de sus sistemas: núcleo del reactor, RCS, Balance de Planta (BOP), la contención y el sistema de Calefacción, Ventilación y Aire Acondicionado (HVAC). Pero, yo estoy traduciendo unos manuales de la Pratt & Whitney y, aunque casi la totalidad de sus manuales, especificaciones y puestas en marcha estan inglés, nos llegó un manual en español y traducían el BoP de esta manera: Sistemas de las Instalaciones Auxiliares (BoP). Espero te pueda servir! Gracias Moniqueux ¡Creo que instalaciones auxiliares es muy buena opción! Respecto a la traducción de Balance de Planta... no sé yo. No soy el más experto del sector, pero créeme que no lo he oído nunca. Un saludo BOP es mucho más que auxiliares En la práctica industrial de generación de electricidad de España y Latinoamérica lo llamamos (tools, fabricantes y clientes): BOP (pronunciado: beopé) porque todos saben que esa sigla representa: "Balance of Plant" Balance de Planta lo he escuchado alguna vez Resté de la planta lo he escuchado alguna vez beopé todo el tiempo. Yo lo dejaría como: BOP\* \* Balance of Plant - en inglés Es un poco tarde, pero de todas maneras le puede servir a alguien posteriormente. Trabajo en una empresa constructora en Chile y siempre lo he escuchado como "beopé", tal como dice @abelito e incluso "balance of plant" pero nunca he escuchado un traspaso al español. Al igual que @abelito, creo que la mejor opción es dejarlo con su sigla en inglés BOP. Saludos, Dear All, I have come across the following sentence in the article noted below: A growing plant requires water and minerals. The plant must also have sunlight. The minerals must include nitrates and the water must not be salty. Generally, the author tries to elaborate on the aspect of using the definite article once it is mentioned for another time in the given text. Yet, isn't this ambiguous in this sentence? To generalise, we usually use an indefinite/definite article with a singular noun, or its plural form if needed. According to this, we can assume that "a growing plant" refers to just a one of all growing plants, and "the plant" to the example of which I am speaking and/or "the plant" as a whole group of living things that grow in earth. However, "the plant" can also mean that I have stopped generalising, and I have only one, specific plant in mind that requires water and minerals. Would it be better, then, to stay with the use of the indefinite article in the second sentence? Or, at least, using the plural form of the noun? A growing plant requires water and minerals. A plant/Plants must also have sunlight. The minerals must include nitrates and the water must not be salty. I look forward to hearing your thoughts and remarks about this sentence. Master, Peter, Teaching the English Article System, English Teaching Forum Anthology, 1989, vol. IV, pp. 208-215. 'The' generalizes only to very specific things: the aardvark eats termites. It can not be used for larger groups like 'the plant', meaning all plants. So 'the plant' in your example must mean "the plant that was just mentioned". Thank you for your feedback. So, following this line of thought, I understand that the authour implies that only the plant mentioned by him needs water and minerals and other plants may not need them. Is that correct? What about other, similar cases? This sentence, for instance, is taken from Britannica: Land plants face severe environmental threats or difficulties, such as desiccation, drastic changes in temperature, support, nutrient availability to each of the cells of the plant, regulation of gas exchange between the plant and the atmosphere, and successful reproduction. Here, as I gather, "the plant" is used to generalise about all plants and their relationship with the atmosphere. Thank you for your feedback. So, following this line of thought, I understand that the authour implies that only the plant mentioned by him needs water and minerals and other plants may not need them. Is that correct? A plant is a generalisation meaning "all plants". When we continue our sentence and use "the plant" to refer to what we've just mentioned that means each example of "all plants". So no, the author is not implying that other plants may not need them. What about other, similar cases? This sentence, for instance, is taken from Britannica: Here, as I gather, "the plant" is used to generalise about all plants and their relationship with the atmosphere. This is another type of generalisation (using the plural instead of "a"), but the same applies : "the plant" refers to any example of "all land plants". Hey everyone I have a question, I'm currently translating a proposal for a Security Assessment. I came across a title Un implant de Seguridad I have no idea what implant could be, so for now I've left it as implant, am I right? From what it sort of explains, I'm guessing it's a person because it explains job functions. Thanks for your help I think there is an error in the phrase, in Spanish the spelling rule is that always write an m before p or b, so it would be implant, however this is not Spanish, Implante, is. Also could be an Americanism, meaning the country where this was written adopted an English word and modified it to be used. I don't think this is the case, but could be. My two guesses for this are: 1. Una implementación de Seguridad, meaning that a safety rule or plan was implemented 2. Un implante de seguridad, meaning the same but misspelled in Spanish, this phrase would be a grammar mistake. I would need to know what was written under this title to have a better idea. Are you translating Spanish to English? Thank you for your reply I'm translating from Spanish - English Ok, so here's what's written below: Un Implant de Seguridad, laborando dentro de las instalaciones del cliente y en donde sus principales funciones serian las siguientes: Escoltar y proteger al cliente Coordinar a los escoltas Llevar a cabo la Implementación de las recomendaciones autorizadas por el cliente. ... And so forth... It's also mentioned in another part... Operación: Consiste en el trabajo cotidiano del Implant..... So, now I'm not too sure if it can be implante or implementación..... It doesn't make sense, does it? Thank you Agencia de viajes situada fisicamente en las instalaciones de otra empresa, a la cual presta sus servicios. Viendo el enlace de jasminasul, estoy de acuerdo con la idea que "implant" es una instalación de una empresa, adentro de las instalaciones de otra empresa. No estoy de acuerdo con el significado de ese sitio da a la palabra, porque no creo que tenga ninguna relación con "implant". Para mí, el adjetivo in-plant describe una instalación que está adentro (in) la planta o fábrica (plant) de otra empresa. En la industria de la tecnología, es común tener "an in-plant store" del distribuidor, adentro de la planta donde se fabrican los componentes. Creo que en el contexto dado en este hilo, se trata de lo mismo. Busqué otros hilos acerca del tema in plant, y vi que se dice igual en los dos idiomas. Ya lo entendí!! Gracias por sus hilos. fenixpollo- Vi tu respuesta a otro hilo y me ayudo muchísimo. Entonces, lo dejaría igual, ¿no? Volví a leer el documento que tengo y entendí que entonces se refieren a un escolta que va a estar como in plant en la empresa del cliente. Muchas gracias de nuevo por tu ayuda. Ah, pero una duda, es in plant o in-plant? Bueno, creo que el uso del guión se considera cada vez más un detalle estilístico; pero por mi cuenta, es necesario para conectar dos partículas cuando esas partículas forman un adjetivo compuesto. Hola en el ámbito de la manufactura a que se le llama plan floor? he aquí el contexto: the networks that carry plant floor data remain a source of significant inefficiency las redes que manejan los datos de la planta son una fuente de ineficiencia planta = plant floor ? gracias heidi Hola heidi En inglés "plant floor" no significa nada en este contexto. Quizás hay una falta de ortografía? O da más contexto, saludos Hola heidi En inglés "plant floor" no significa nada en este contexto. Quizas hay una falta de ortografía? O da más contexto, saludos Hola, Pensé que era algo más genérico. Aquí el párrafo completo For years manufacturers have been using automation to improve productivity and reduce costs on the plant floor. However, the networks that carry plant floor data remain a source of significant inefficiency. Gracias Heidi Hola otra vez Heidi. Ahora entiendo. Su traducción es muy bueno. "Plant" y "plant floor" significa, esencialmente, lo mismo en este contexto, saludos Hola otra vez Heidi. Ahora entiendo. Su traducción es muy bueno. "Plant" y "plant floor" significa, esencialmente, lo mismo en este contexto, saludos Hola Cómo te suena "piso de producción" para plant floor en este contexto. Heidi In Pakistan, the best season for planting/growing/cultivating wheat crop is winter season. It is then harvested in summer, in the months of June and July. Self-made Could you please explain the difference? If you are asking for the difference between 'planting', 'saldos' and 'cultivating': 'planting' means putting a plant in the ground, 'growing' can mean the whole process or some of it from 'sowing the seed', 'planting the plant', 'watering' and 'feeding' the plant, 'cultivating' refers to the preparation of the soil for the seed or plant to go in. Plant means to put the seeds in the ground. Whether anything grows as a result of that is another matter. Grow can be intransitive or transitive. Flowers grow. You can grow flowers. Cultivate is similar to grow in its transitive sense. It sounds technical and literary. It refers to agricultural activity in general. I don't think you'd use it for what you do in a single season. We're cultivating wheat this year sounds odd to me. Cross-posted. I see Nutcase7 emphasises tillage for cultivation. I'm not arguing with that. I think we can "plant" a crop (meaning put the seeds into the soil), and "grow" a crop (meaning the whole process: sowing the seed, planting the plant, watering and feeding the plant). But we cannot "cultivate" a crop. We can only cultivate a land/soil (meaning preparing/improving it for things we want to grow. Is that right? I think we can "plant" a crop (meaning put the seeds into the soil), and "grow" a crop (meaning the whole process: sowing the seed, planting the plant, watering and feeding the plant). But we cannot "cultivate" a crop. We can only cultivate a land/soil (meaning preparing/improving it for things we want to grow. Is that right? I think we can "plant" a crop (meaning put the seeds into the soil), and "grow" a crop (meaning the whole process: sowing the seed, planting the plant, watering and feeding the plant). But we cannot "cultivate" a crop. We can only cultivate a land/soil (meaning preparing/improving it for things we want to grow. Is that right? I think we can "plant" a crop (meaning put the seeds into the soil), and "grow" a crop (meaning the whole process: sowing the seed, planting the plant, watering and feeding the plant). But we cannot "cultivate" a crop. We can only cultivate a land/soil (meaning preparing/improving it for things we want to grow. Is that right? I think we can "plant" a crop (meaning put the seeds into the soil), and "grow" a crop (meaning the whole process: sowing the seed, planting the plant, watering and feeding the plant). But we cannot "cultivate" a crop. We can only cultivate a land/soil (meaning preparing/improving it for things we want to grow. Is that right? I think we can "plant" a crop (meaning put the seeds into the soil), and "grow" a crop (meaning the whole process: sowing the seed, planting the plant, watering and feeding the plant). But we cannot "cultivate" a crop. We can only cultivate a land/soil (meaning preparing/improving it for things we want to grow. Is that right?
