TouchFad mode - Check the remote device like a touchpad with Swipes. Tap at Touch Model - (default for Android for Android) Translate Mouse input for input touch - Default settings to activate the mouse for translation touch. Gestures: Touchpad mouse and mode: One-Finger Swipe moves the two-finger mouse Swipe enlarges the image. Three-finger Swipe scrolls scrolls Tap for the left mouse button with the right right-click mouse button to click with the Android shortcut key to screw a command, open the keyboard settings in a session or hold down the CTRL + ALT keys + Shift at the same time and press one of the following keys: F5 key function / home / pos1 android home f6 / backspace android android back f7 volume down f8 volume up f9 / escape android power f10 android menu android end android dpad center main menu main menu and settings Open the main menu by scrolling from the left main menu on the home screen or touching the three-band button at the top left. Phonebook: If a personalized licensed client is used Session Session Recordings Tutorial Guide Settings (support.Anydesk.com) About Anydesk Quit Anydesk Settings The settings on Android are based on the Anydesk settings on Windows. For usability, the available options are customized for Android. General Choose an alias and if it should be displayed instead of the ID. Safety set Interactive access, unattended access, two-factor authentication, standard permissions, discovery behavior and settings protection via device password or biometric authentication. Privacy Select username and image. Insert the automatic keyboard: select if the keyboard appears when the text entry field is touched. Choose the Touch mode: the mouse or touchpad display Choose whether to show the quality of the Remote cursor: Original Balanced Best Reaction Time Audio Select if the microphone is transmitted. Choose if audio from the remote client will be transmitted. Connection connection settings To configure the proxy and connection behavior. See the connection. Recording Choosing to record the start session sessions Incoming sessions Outgoing sessions Using Anydesk with managed profiles (work profile) Procedure to make the AD1 plug-in ready for Anydesk Connections to a managed profile (order is important) Make sure the plugin is installed in the main profile and in managed profile. Make sure the plugin is activated in the accessibility settings. Open the plugin inside the main profile. Click the OverFlow button and configure the plugin. If it doesn't work, try it from the managed profile. You may need to allow the communication of the cross profile in the MDM solution. Examples of code for MDM The relevant filter is: Action = "com.anydesk.adcontrol.ad1.configure" category = "android.intent.category.default" code example: filter = new IntentFilter (); filter.addAction (intention.category default); int flags = devicepolicymanager.flag_managed can_access_parent [Devicepolicymanager.flag_parent can_access_managed; DevicePolicyManager.AddresssprofileIntentFilter (GetComponentName (context), filter, flags); Management of mobile devices Starting from version 6.1.10 The Anydesk Android app can be integrated with Microsoft Intune. This is currently only available for the standard Anydesk client, which can then be customized on Microsoft Intune Web-UI. On the options of Microsoft Intune Web-UI All available options are displayed, including short descriptions of how they work and what they do. For more specific information on how to do this, click here. Personalized client installation AnyDesk is available as a custom client. This custom client APK is therefore available as APK. To install it, it is necessary to allow the installation of sources not entrusted. This can be done for specific apps, it is advisable to do it only for file explorers and not for the web browser app. Note: set the name and names Menu may differ depending on the Android version and the seller. The examples are based on Google Android original. Allow the installation from non-reliable sources Search for "source" in the App Settings Open "Install App apps" Allow the installation from the Explorer file troubleshooting the plug-in cannot be activated due to changes by some suppliers On Android, a restart of the Android device may be required because the control plugin is functional. WARNING OF THE ANDROID TV Plugin: Please note that the use of this alternative solution is without warranty from Anydesk, and can damage and even violate your warranty In the event that the Android / Fire TV device provider has disabled the accessibility settings, the control plugin for AnyDesk cannot be activated. Anydesk can therefore only be used for remote view. A possible alternative solution is to use the ADB shell. The plugin can be enabled using the following command: SHELL ADB settings Insert Secure Enabled accessibility_services com.ydesk.adcontrol.ad1 / com.Anydesk.adcontrol.accesservice More information on ADB can be found at the official ADB documentation. ScreenRecording dialog box (Android 10+) Starting from Android 10 and Newer, Android Forces to accept a dialog box for screen recording. An alternative solution to bypass the request is the following ADB Shell command: Normal version: ADB Shell Appops Set Com.AnyDesk.AnyDeskandroid Project_Media Allow à € "Battery" Select repeat steps "No restrictions" 2-3 for "Plugin Anydesk" Open the phone settings app Switch to "Battery" -> "Battery optimization" Tap "Not optimized", then "All apps", locate "Anydesk" in Resulting list and touch "Do not optimize" Repeat steps 2-4 for "Plugin Anydesk" Send support information Send track files on the error or after the abnormal stop: Open the sidebar switch on 'About Anydesk' choose Send Send Send information
