Looking for a way to track all of the new marketplaces that seem to pop up overnight? Fraud accounts for around 70% of all non-drug related trade on the dark web (Avast) In this post, we'll walk you through the top 10 dark web marketplaces that you need to watch for potential threats to your organization. What is a dark web market? A dark web market is an online marketplace that operates on the dark web, a hidden part of the internet that's not accessible through regular search engines or browsers. These markets sell a range of illegal goods and services, including drugs, weapons, stolen data, and counterfeit items, and they typically require special software like Tor for access. Transactions are made using cryptocurrencies to maintain anonymity. Dark web markets have gained notoriety for their illicit offerings. Here's a look at the top 10 dark web markets currently dominating this underground space. 1. Abacus Market Launched in 2021, Abacus Market caters primarily to English-speaking users. It offers a wide range of illicit goods, including illegal drugs, counterfeit items, fake IDs, passports, and software keys. The market is also known for its listings related to financial fraud, such as phishing tools and stolen credit card information. What sets Abacus Market apart from other dark web platforms is its emphasis on customer service and their vendor verification system. These features help establish trust between buyers and sellers, providing users with a sense of security that many other markets lack. 2. STYX Market STYX Market is a newcomer, having launched in early 2023. It quickly gained traction as a hub for financial cybercrime. This marketplace focuses on selling stolen financial data, such as BINs (Bank Identification Numbers), RDP/VDS access, and verified crypto accounts for money laundering. Its user base is primarily English-speaking, and it appeals to more sophisticated cybercriminals. With enhanced security features and a strong focus on financial fraud, STYX has become a go-to marketplace for those looking to engage in cybercrime on a more technical level. 3. Mega Market Mega Market, established in 2016, experienced a surge in popularity following the takedown of the Hydra market. This marketplace specializes in a variety of illegal products, including drugs, counterfeit documents, and hacking tools. Mega Market is known for its user-friendly interface and high security, including support for PGP encryption and two-factor authentication. It allows vendors to sell without registration, which provides an added layer of anonymity, making it one of the more flexible and user-friendly markets on the dark web. 4. Bohemia Bohemia entered the dark web scene in May 2021, quickly rising due to its modern interface and strict rules that reduce the likelihood of scams. The marketplace requires merchants to pay fees to sell their products, helping ensure a certain level of quality control. Users are also bound by strict rules, and any violations result in immediate consequences. Bohemia accepts Monero and Bitcoin as payment methods and places a strong emphasis on protecting user anonymity through PGP encryption. 5. Cypher Market Founded in 2020, Cypher Market has carved out a niche on the dark web by focusing on cybercrime products. The market has become the go-to place for individuals looking to purchase malware, exploit kits, and software vulnerabilities. Unlike many other dark web markets, Cypher does not require buyers to deposit cryptocurrency upfront, which reduces the risk of exit scams. Transactions are conducted through Bitcoin and Monero which provides anonymity for both buyers and sellers. 6. Russian Market The Russian Market has been around since 2019 and is one of the more prominent dark web marketplaces. Their specialty is selling stolen data, including login credentials, credit card information, and compromised accounts. Russian Market is particularly known for its focus on stealer logs data extracted by malware that captures sensitive information like usernames, passwords, and session cookies. The platform is favored by cybercriminals seeking access to accounts that can be exploited for fraud or sold to others. FreshTools, founded in 2019, specializes in selling stolen account credentials and data, particularly webmail, RDPs (Remote Desktop Protocols), and cPanels. Fresh Tools Market has become a go-to platform for cybercriminals seeking access to malicious software such as keyloggers, Remote Access Trojans (RATs), and ransomware-as-a-service. In addition to these tools, the market offers access to compromised accounts, VPN services, and digital identities, making it a hub for individuals involved in illegal activities like hacking, identity theft, and other forms of cybercrime. One of the distinguishing features of Fresh Tools Market is its focus on providing up-to-date, freshly obtained tools and credentials. The market emphasizes anonymity and security, conducting transactions exclusively through cryptocurrencies like Bitcoin and Monero. 8. MGM Grand Market Launched in April 2021, MGM Grand Market is a dark web marketplace that focuses on the sale of counterfeit goods, stolen financial data, and a range of illicit digital products. Since its inception, the market has catered to criminals looking for high-quality counterfeit items, such as fake IDs, passports, and branded luxury goods. In addition to counterfeit merchandise, MGM Grand Market offers access to stolen credit card information, compromised bank accounts, and other financial-related services. The market is known for its extensive product listings and reputation system that helps buyers evaluate the reliability of vendors. 9. BidenCash BidenCash, established in 2022, is notorious for its involvement in selling stolen credit card information and personally identifiable information (PII). The market frequently makes headlines for releasing massive troves of stolen data, often as a way to advertise its services. In 2022, for example, BidenCash was linked to the breach of over 1.2 million credit card records. This platform has rapidly become a key player in the fraud market, trading in PII and SSH credentials while making use of both the clear and dark web. 10. Zeasy Operating since 2020, Zeasy Market is a dark web marketplace known primarily for its focus on stolen data and cybercrime services, particularly targeting compromised accounts and personal information. Zeasy has quickly gained traction as a go-to platform for hackers looking to buy and sell databases containing breached credentials, Social Security numbers, financial records, and login details for online banking and e-commerce platforms. The market is especially well-known for providing access to freshly compromised data, often obtained from recent breaches and stealer logs. In addition to its emphasis on stolen credentials, Zeasy Market offers a variety of cybercrime tools, such as hacking services, exploit kits, and other resources for conducting cyberattacks. Why You Need Automated Dark Web Monitoring Organizations need automated dark web monitoring to prevent cyberattacks. With the constant threat of data breaches, compromised credentials, and intellectual property leaks, automated dark web monitoring helps organizations stay ahead by continuously scanning dark web forums, marketplaces, and other hidden platforms where cybercriminals trade stolen information. This early detection allows organizations to identify and respond to threats quickly, reducing the chances of unauthorized access, financial loss, or damage to brand reputation. Manual monitoring of the dark web is inefficient and risky due to the sheer volume of data involved. By leveraging automated dark web monitoring, organizations can mitigate risks, and take preventive measures before the leaked data is exploited. Need an automated dark web monitoring solution? Book a demo to see how BreachSense can help. The darknet marketplaces have gained attention during the COVID-19 pandemic. Darknet marketplaces are a decentralized, unindexed, and unregulated part of the World Wide Web, accessible using specific browsers like Onion Router or Tor. Silk Road was the first darknet marketplace to use cryptocurrencies for payment, which paved the way for today's underground world of dark web marketplaces to follow suit. After the closure of a darknet marketplace, it takes around 5 days for trading volumes to recover, and users may move to other dark marketplaces, which is called migration. Blacksprut, Mega, Solaris, OMG! OMG!, and CTS Market are identified as the most active darknet marketplaces in 2022 after the unexpected closure of Hydra Marketplace. The sanctions against Hydra may have a lower effect than intended, as the migration process and redistribution of the Russian market by other darknet marketplaces are observed. The world of the darknet has always attracted the attention of the masses. But darknet marketplaces entered the spotlight at the start of the COVID-19 pandemic, when the combination of a public health emergency, an economic crisis, and disinformation panic pushed some merchants and customers into the shadow economy. In addition, the U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) has recently sanctioned the world's largest and one of the most infamous darknet markets, Hydra Market (Hydra), which only increased ordinary citizens' interest in this phenomenon. The darknet (or dark web) is a decentralized, unindexed, unregulated part of the World Wide Web that is only accessible using certain browsers, such as the so-called Onion Router, or Tor for short. The dark web has become an immense centre of criminal activity, a fully working marketplace where buyers and sellers may buy banned goods and services without any fear of detection. But in addition to the marketplace, darknet participants also need an untraceable payment method in order to maintain maximum confidentiality in their activities. Silk Road was the first darknet marketplace to use the anonymity of cryptocurrencies for payment, thus paving the way for today's underground world of dark web marketplaces to follow suit. The GL research team notes that the main currency for conducting transactions on the dark web is Bitcoin (BTC); almost 100% of the transactions of the studied marketplaces used this currency. Therefore, our analysis focuses on transactions in BTC. This is what allowed the GL team to conduct an investigation to identify the most active darknet marketplaces since the beginning of 2022, especially after the unexpected closure of Hydra Marketplace, which dominated over 70% of the Russian darknet marketplaces. Research on the collective dynamics of dark web marketplaces shows that after the unexpected closure of a darknet marketplace, it takes on average about 5 days for trading volumes to recover, which suggests that users may move to other dark marketplaces. This process is called migration. Moreover, 66% of migrating users choose to move their activity to the same coexisting marketplace. Migration was observed repeatedly during our investigation. For example, after the closure of the AlphaBay marketplace, other marketplaces, namely Hansa and Dream Market, experienced an abnormal spike in activity. Based on these facts, the GL team was able to identify the following activity in the volume of transactions across darknet marketplaces: Blacksprut breaks the rating in terms of transaction volume, despite the fact that it operates exclusively in Russia. Since it began operating over a year ago, Blacksprut has had thousands of users, with over 1,100 active vendors at the moment. Instead of traditional home deliveries, the market specializes in drop-offs. Customers essentially get instant access to local products. This works by per-distributing the products around cities and providing customers with coordinates to them. The market only supports BTC and has conducted 1041.55 BTC transactions since the beginning of 2022. Mega darknet market is also a Russian market, but with a longer history; it has existed since 2016. Mega's popularity started to skyrocket after Hydra was buried, and it is currently on track to become one of the largest darknet marketplaces in Russia. It has over 2,600 merchants and had generated 1006.02 BTC in transaction volume at the beginning of 2022. Mega also features an exchange that allows users to exchange BTC for Monero, as well as a mixer designed to help launder the funds used. Solaris has long held its place in the darknet market, operating since 2015. After the closure of Hydra, it actively attempted to advance in the market by hacking RuTor, the largest Russian darknet forum, and trying to lure stores away with additional discounts and bonuses. All transactions on Solaris are in BTC, and it also has a built-in exchange, which meant it ranked third in our rating system with a transaction volume of 720.14 BTC. OMG!OMG! is the youngest of the marketplaces on our list, having launched in 2021. OMG!OMG! is also based in Russia, but unlike the previously mentioned markets, it is international. Currently, it has over 1,000 listings. Payment on the platform is made in BTC to the built-in wallet, and since the beginning of this year, OMG!OMG! generated a payment volume of 689.79 BTC. One atypical security feature unique to this market is called the kamikaze password, which fraud actors are trying to protect themselves with. It can be used in emergency situations to destroy their accounts. CTS Market is also a representative of Russian marketplaces and acts as a store that presents its products in the other large marketplaces on our list. It has been on the market since the RAMP forum. Payment for prohibited goods is made in BTC, and despite the absence of an independent market, the transaction activity of the CTS Market store generated a volume of 118.75 BTC in 2022. The closure of and sanctions against Hydra were a standout event this year, significantly reducing its stand-alone trading volumes. But as we can see, due to the migration process and the redistribution of the Russian market by other darknet marketplaces, the sanctions may have a much lower effect than what was originally intended. All XMR Multisig Recon ZEC Collective OMG LTC Submissions Non-English Dead Markets All markets less pending & dead Markets with Monero Support Markets with Multisig Support Markets listed on Recon(Link) Markets with ZCash Support Markets that work together via the darknet collective(Link) Markets compliant with Dark-Fail's Onion Mirror Guidelines(Link) Markets with Litecoin Support Markets requesting listing go here.
