On September 3, 2019, Google officially released the latest version of Android and called it Android 10. In contrast to previous versions of Android, he interrupted the dessert version of the chronology of his name, but directly in terms of numbers. The original name Android 10 is Android Q. From Android 1.0 to Android 10 the operating system has taken a huge step in terms of graphics, concepts and functionality. You are wondering how to quickly get Android 10 and Android 10 updates. Don't worry, this article contains a detailed explanation and three ways to update the Android version. Advantages of updating the Android system (functionality of Android 10): 65 New support of emotion gestures for the navigation support function for dark topics with the subtitles of messages and sound news in real time. In real time, access to work and methods of sharing with a monochrome QR Wi-Fi camera, which supports a reasonable answer, and the response to messages saves your private data with greater control. You get the Google Play store update faster Android 10 functions are looking forward to updating the latest version of Android. However, Android's update is not as easy as it may seem. Even if you have read many trainings, you will find that most of them are too complicated to understand them. To meet your needs, I will show three simple and effective ways to update the Android version, you always have a way. Method 1. How to normally update the Android version about OTA updates, you will receive OTA notifications (via Eter) when you have access to Android 10 updates. Hence, you can touch update operations to update the Android system to the latest version. However, if for some reason it is not displayed on the phone or you have not mistaken notifications, you must manually update the Android version: connect the Android phone with the Wi-Fi network. Go to setting> Information on your device, so it depends Download and install the latest version of Android updates> Check updates> Updates> Updates. When the installation is complete, the phone will start automatically and updated. Method 2. How to update the Android version of the package update, normally, the official website of mobile phone manufacturers will update some system files for users to download and update. You can go to the Download Center for the Android official website and download the latest system update package according to the phone model. Save it on the SD phone card when you complete the download. If you want to update the Android version version, you need to negatively select the system update> system updates when the phone displays the existing package, download and install the package. After restarting, the phone is automatically updated to Android 10 (Q). Method 3. Rooting How to update Android using a well-established device is a very effective way to update Android. If you need to update your Android operating system to the latest version, you can try to take root not only to have the highest level of super user authorities in different Android subsystems, but also access to updates without any problems. To take rooting of the Android phone, follow -Crok's instructions -Step: Download and install the root application on your computer. After starting, connect the phone to your computer using the USB cable. Enter the phone using the instructions. Reboot the phone and get the latest version of Android. Android 10 supported Android 10 mobile phones were first introduced by Google. Now many mobile phone manufacturers have released the latest version of Android. Below is a List Android 10: Google Pixel 2 Google Pixel 2 XL Google Pixel 3A Google Pixel 3A XL Note 10 Series Galaxy S10 S10 Sires G8 TheTQ LG G7 OnePlus 7 for OnePlus 7 Asus Zenui 6 Asus Zenfone 5Z Nokia 8.1 - Before Android update Does the deposit have three ways to update the above version of Android OS, do you know? So you can share with your family and friends to benefit from all new Android features 10. Meanwhile, whatever method you choose, it is recommended to back up everything Data from phone to computer to prevent accidental data loss. Of course, if you lose data after updating Android version without backup, it doesn't matter, because there is free software to recover deleted or lost data without backup, that's data recovery. With it, you can easily recover deleted contacts, messages, call logs, photos, music, videos and other files from phone memory or SD card with perfect quality. 1 Download the software on your computer from the manufacturer Android Spanner. This varies by manufacturer, but you can usually find the software in the Downloads section of the manufacturer's support site. Next, we'll show you how to download legacy Android software: On the Samsung fine Gravel download page, scroll down and click "Download Gravel" (on a Mac, click "Smart Switch"). LG A Open the LG PC Suite page, scroll down and select the operating system you want to use, such as Windows. SONY Go to the Xperia Companion download page, then click Download for Windows or Download for Mac OS. Motorola A Go to the Motorola Device Manager download page, then click Download for Windows or Download for Mac. 2 Install the computer software. Double-click the downloaded configuration file and follow the on-screen instructions. On a Mac, click the software logo and draw it over the link to the software folder. Software testing may be required prior to installation. 3 Find the optional update and download it. If the Android manufacturer has provided an update, it can usually be found in the Downloads section of the Support page. You may also need to download the type and model of your Android device in order to find the correct update file. Clicking on a filename or download button usually starts the download. If you don't see any updates on the page, then there are no new updates for your Android devices. 4 Connect your Android device to your computer. Connect the USB end of the Android charging cable to your computer and the other end of the cable to your Android device. If you have a Mac, you should Buy USB 3.0 from USB-C to connect the charging cable to Mac. 5 - IT software. Click on the computer program icon or double it. You can also enter the name of the software at the start (Windows) or Spotlight (Mac), then click the name in the search results or create it twice. 6 Find the update option and click on it. When this option is, it generally changes depending on the software. Samsung must first click on the "Tools" menu, then update. 7 I wish you an update file. Click on the downloaded file update file to choose, then click to confirm. You can first click on the button using a text file or click to pay the file. 8 Follow the screen instructions. The installation varies depending on the Android software and model, so click on screen instructions until updating the update. Do not delete the Android device from your computer until the end of the update. Advertising advertising advertising
